

Care & Cleaning of Inside Out Performance Fabrics®

Inside Out Performance Fabrics meet and exceed all testing requirements for durability and safety as it relates to industry standards. Fabrics are free of potentially harmful levels of chemicals and flame retardants such as PFOS, PFOA, formaldehyde, heavy metals, phenols and phthalates.

CLEANING CODE = W S B

Fabrics are cleanable with water-based detergents, solvents and bleach.

GENERAL CLEANING FOR INSIDE OUT PERFORMANCE FABRICS

We recommend vacuuming regularly with an upholstery attachment, since dust and dirt cause fabric to wear more quickly.

- Flip, rotate and fluff removable cushions regularly to ensure even wear and increase longevity.
- An annual professional cleaning will keep your upholstered furniture looking its best.
- Maintenance requires promptly treating spots and stains and should include routine, on-going care which reduces soil build-up on a fabric's surface.
- Do not rub or brush excessively or you may cause fuzzing.
NOTE: Use light steam or low temperature iron to remove wrinkles.

SPOT CLEANING FOR EVERYDAY MESSAGES

The spot cleaning method of stain removal can be used for most light to medium stains, such as coffee, red wine, and ketchup. Be careful to brush lightly since fibers can be broken or matted in the cleaning process.

1. Blot up liquids on the surface with a clean, soft towel and brush off any loose debris.
2. Prepare a soap-based enzyme detergent solution of 1/4 tsp. standard dishwashing liquid per 1 cup of lukewarm water.
3. Apply the cleaning solution using a misting spray bottle and allow the solution to soak into fabric.
4. Lightly scrub the affected area with a sponge or soft bristle brush. Work from the outside of the stain inward so as not to spread the stain. Rinse sponge or brush frequently.
5. Rinse thoroughly to remove all soap as residue will attract dirt. Blot excess moisture with a clean, soft towel or sponge.
6. Repeat as needed.
7. Allow fabric to air dry.

SPOT CLEANING FOR INDIGO OR INK STAINS FROM WHITE FABRIC

Indigo transfer from overdye denim can affect any surface including fabric, vinyl and leather. Fabric dyes and inks are intended to be permanent so they are among the most challenging stains to remove. Indigo transfer can only be prevented by washing the jeans until the excess dye has been removed.

1. Blot the stained fabric with a white, clean, dry cloth.
2. Apply generous amounts of rubbing alcohol and blot dry with a clean, dry cloth.
3. Repeat as necessary.
4. If fabric can be removed and washed, apply a small amount of Woolite® or other fabric cleaner.
5. Allow the cleaner to remain on the stained fabric for 15-20 minutes.
6. Rinse thoroughly with cold water.
7. Repeat as necessary.

SPOT CLEANING FOR OIL-BASED STAINS

Immediately apply an absorbent such as cornstarch directly on the stain. Let sit for 10 minutes and remove the excess using a straight edge or ruler. This helps lift the stain and prevents it being pressed into the fabric. Then proceed with the cleaning process for everyday messes.

SPOT CLEANING FOR STUBBORN OR EXCESSIVE STAINS

The use of bleach is recommended for mold and mildew caused by exposure to the outdoors. NOTE: *Always test in an inconspicuous area first to ensure cleaner doesn't affect the color of the fabric. Do not use bleach in proximity to any other textile.*

1. Remove any loose debris and blot the stain.
2. Prepare a bleach-based cleaning solution. Bleach should be diluted with water on a 1:4 ratio.
3. Apply the bleach based cleaning solution using a misting spray bottle and allow the solution to soak into fabric.
4. Lightly scrub the affected area with a sponge or soft bristle brush. Make sure to work from the outside of the stain inward so as not to spread the stain and rinse your sponge or brush frequently.
5. Blot and thoroughly rinse fabric with water until the stain is cleaned. NOTE: *Make sure that all bleach is rinsed off of the surface of the fabric.*
6. Allow fabric to air dry.
